

Help – Clutch Assembly The springs on the clutch shoes are very strong and difficult to assemble see photograph for the way in which we used a guide pin alternatively you can buy an Ansmann clutch installation too.

We used a rod to keep the spring lined on up with the holes in the clutch shoe and then slid it onto the flywheel pin using a small screw driver and pliers

Please also look to our previous newsletters for technical advice; these are all on the Formula Schools website www.formulaschools.com
Alternatively please do contact us; info@formulaschools.com
or
01869 819582

Note, the longer part of the spring wraps around flywheel securing nut

Ansmann Clutch Shoes Removal/ Installation Tool

Rob has also sought advice and there is a tool you can buy to assist you. It is the 'Ansmann Clutch Shoes Removal/ Installation Tool'.

We did a quick search via Google and one of the first results and the cheapest was from 'Junction 8'.

Please look to the link below however the product is easily found via a Google search.
